CALLED-IT · OCTOBER 24, 2026

Called It!

Using AI Classifiers to Score Annual Predictions. We graded 4 sets of 2026 predictions at three bars each, with every receipt attached, before the 2027 prediction season opens. The tool is open source and runs on anyone.

Every · Mike Ippolito · Bob Doll · Scott Galloway

THE RITUAL AND ITS MISSING HALF

Everyone predicts. Almost nobody grades.

Every November to January, people who think for a living write down what next year will bring. Then the year happens and the lists are forgotten.

The few who grade themselves grade generously, because the bar was never written down.

ONE LIST, TWO HONEST GRADES

Mike Ippolito, 2025 predictions

Graded by himself: **21 of 27 (78%)**

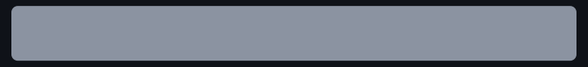

Graded by a trade publication: **48%**

Neither grader wrote down the bar.

THE IDEA

Three bars, written before any evidence

Strict

what a hostile critic would require: the literal claim, numbers and dates intact

Standard

what a fair reader would accept as ”this happened”

Lenient

the weakest reading a critic would still concede counts

- Lenient is lenient about the claim, never about the evidence. Social chatter meets no bar.
- An author admitting a miss is strong evidence. A victory lap is weak.
- The gap between lenient and strict is the number: how much the grade depends on who is grading.

WHY NOW

A grader whose numbers reproduce

RE-ASKED LIVE

120

answers, two subjects, hours apart

WITHIN 5 POINTS

97%

mean drift 1.1 to 1.4 points

OFFLINE REPLAY

byte-identical

no API key, no network

COST PER SUBJECT

<$0.10

classifier; X API $0.14 total

- Reasoning models do the reading, the searching and the bar-writing.
- TypeSafe's Jev answers the same typed yes/no questions over fixed evidence rows and returns calibrated probabilities, not prose.
- Every run commits its sources, claims, bars, evidence and the grader's answers. Anyone can replay it.

THE SUBJECTS

A spread, not a pile-on

PERSON
Bob Doll

14 claims graded

COMPANY
Every

22 claims graded

PERSON
Scott Galloway

15 claims graded

PERSON
Mike Ippolito

20 claims graded

Chosen for range: a company predicting the thing it builds, a crypto list full of numbers, a macro list with a 30-year ritual. None of them asked for this; all of them wrote things down in public.

SCORECARD · PERSON · AS OF 2026-10-24

Bob Doll: 14 claims, three bars

STRICT	STANDARD	LENIENT	GENEROSITY GAP
21%	29%	36%	14 pts
3 met · 6 not met · 5 open	4 met · 5 not met · 5 open	5 met · 3 not met · 6 open	lenient minus strict

- Met at every bar: inflation sticky (core PCE 3.0%, unchanged), spreads wider, forward P/E 22 to 19.
- Not met at every bar: earnings growth 32.8% against 'falls short of 14%'; the 10-year above 5% on 22 days against 'high 3s to mid 4s'; S&P up 11.4% against 'no double digits'.
- His own October scorecard: 5 right direction, 0 wrong, 5 too soon. Ours at standard: 4 met, 5 not met, 5 unresolved.

SCORECARD · COMPANY · AS OF 2026-10-24

Every: 22 claims, three bars

STRICT	STANDARD	LENIENT	GENEROSITY GAP
4%	32%	55%	50 pts
1 met · 5 not met · 16 open	7 met · 3 not met · 12 open	12 met · 0 not met · 10 open	lenient minus strict

- The one strict hit: 'designers are going to be able to code' (half of 900 surveyed designers shipped AI-generated code to production).
- Shipper: Cursor will stumble. Hoffman: none will. SpaceX bought Cursor for $60 billion. Neither bar had room for it.
- 16 of 22 open at strict: the list is made of adjectives, and October cannot settle 'agents go mainstream'.

SCORECARD · PERSON · AS OF 2026-10-24

Scott Galloway: 15 claims, three bars

STRICT	STANDARD	LENIENT	GENEROSITY GAP
0%	27%	47%	47 pts
0 met · 7 not met · 8 open	4 met · 5 not met · 6 open	7 met · 3 not met · 5 open	lenient minus strict

- Met at standard: space (SpaceX IPO at $1.75 trillion), prediction markets as the year's vice (June alone matched all of 2025; New York sued Kalshi and Polymarket), AI companions as a policy issue (twelve state laws), college enrollment up.
- Not met: Amazon as the Big Tech pick (+7.4% vs the S&P's +12.3%); a 20% AI correction (11% was the worst); the recession; TikTok US as the best investment (closed at $14B, not the $28B he wrote); Scotland.
- The strict row is empty: almost every heading is a thesis, not a number. 8 of 15 still open.

SCORECARD · PERSON · AS OF 2026-10-24

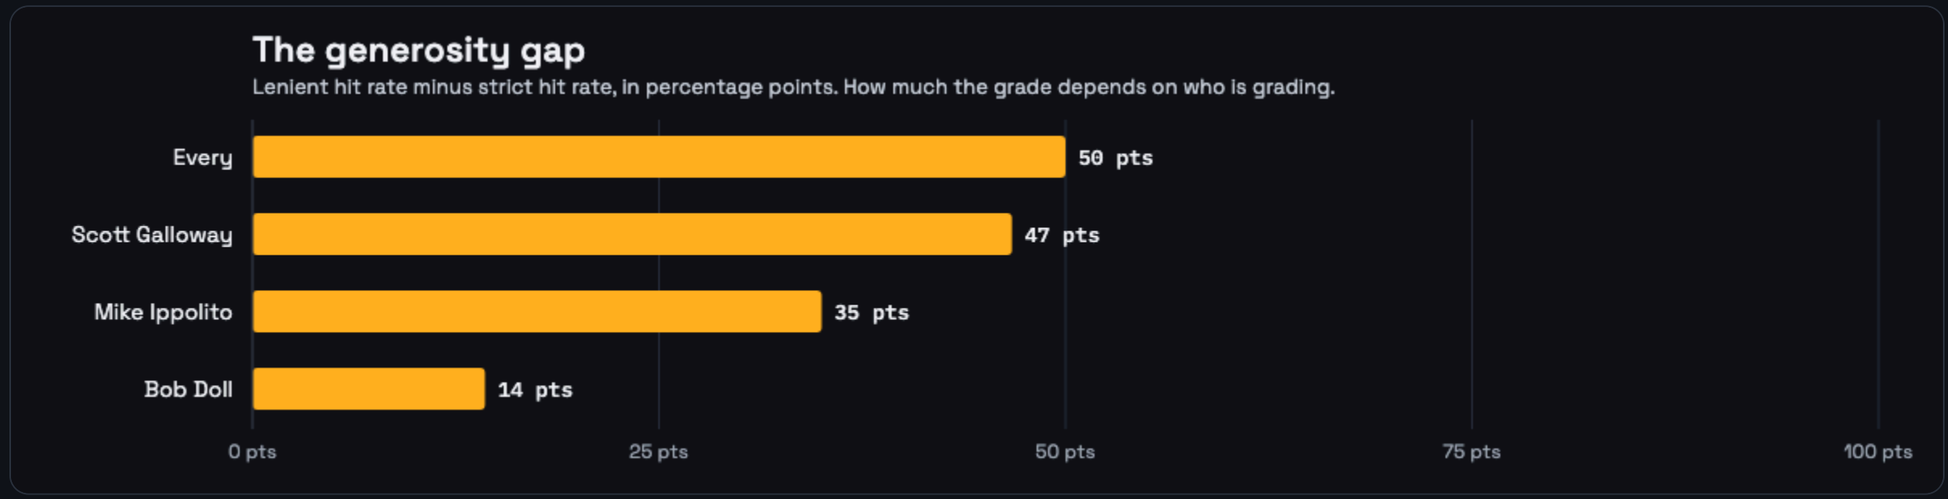

Mike Ippolito: 20 claims, three bars

STRICT	STANDARD	LENIENT	GENEROSITY GAP
10%	35%	45%	35 pts
2 met · 11 not met · 7 open	7 met · 4 not met · 9 open	9 met · 2 not met · 9 open	lenient minus strict

- Met at every bar: prediction-market volume 2X (June to August alone beat all of 2025); Solana REV bottomed in June and doubled by September.
- Not met at every bar: ETH 'best year since 2021' (down 21%); 'ZEC will have a bad 2026' (up 129%).
- Where the bars split: Base's content coins fell 99.8% (standard met) but Base still leads every L2 category (strict not met).

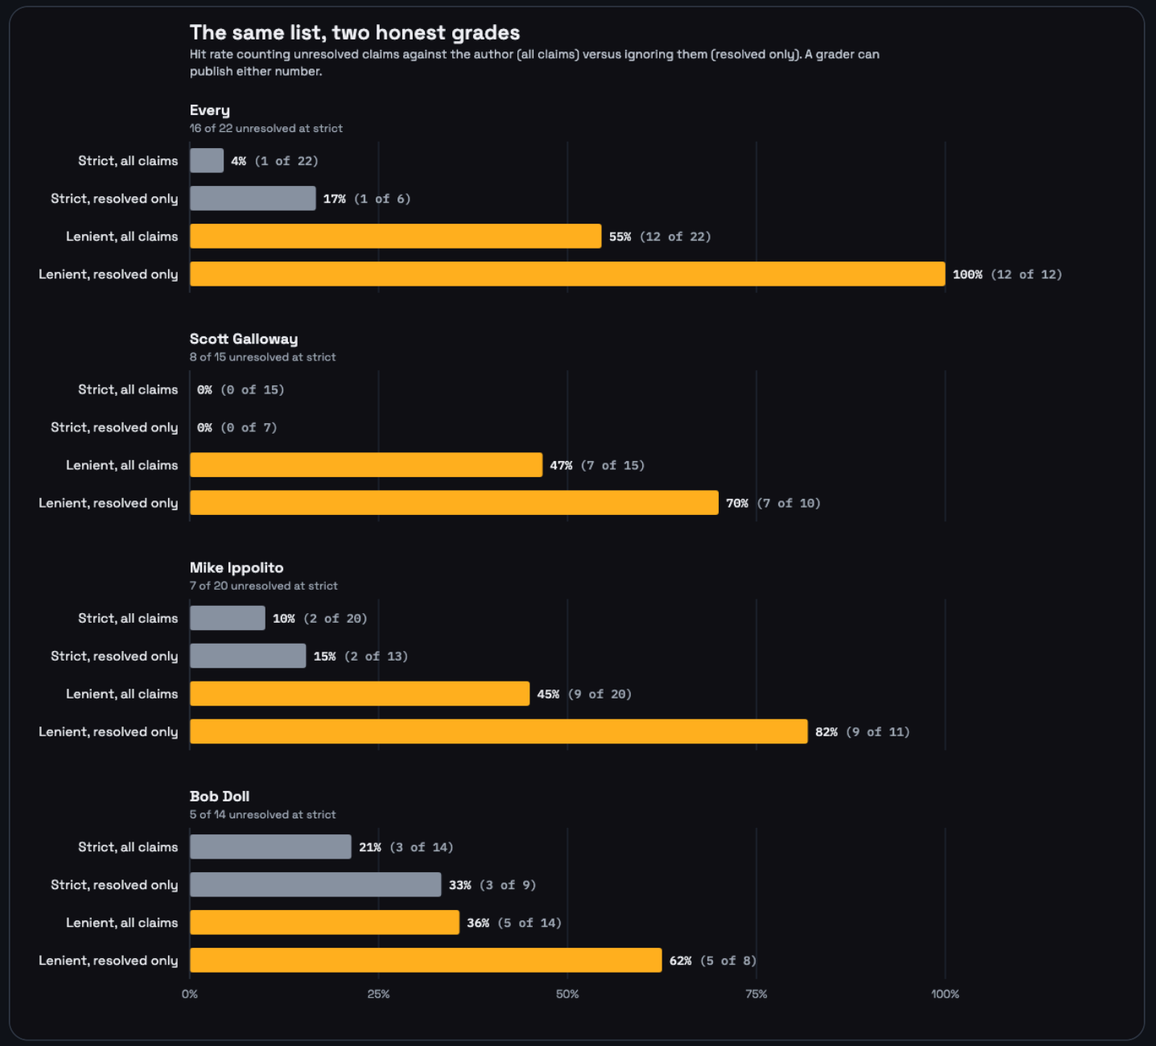

FINDING 1

The gap scales with how narrative the list is

FINDING 2

The same list supports a 100% and a 17%

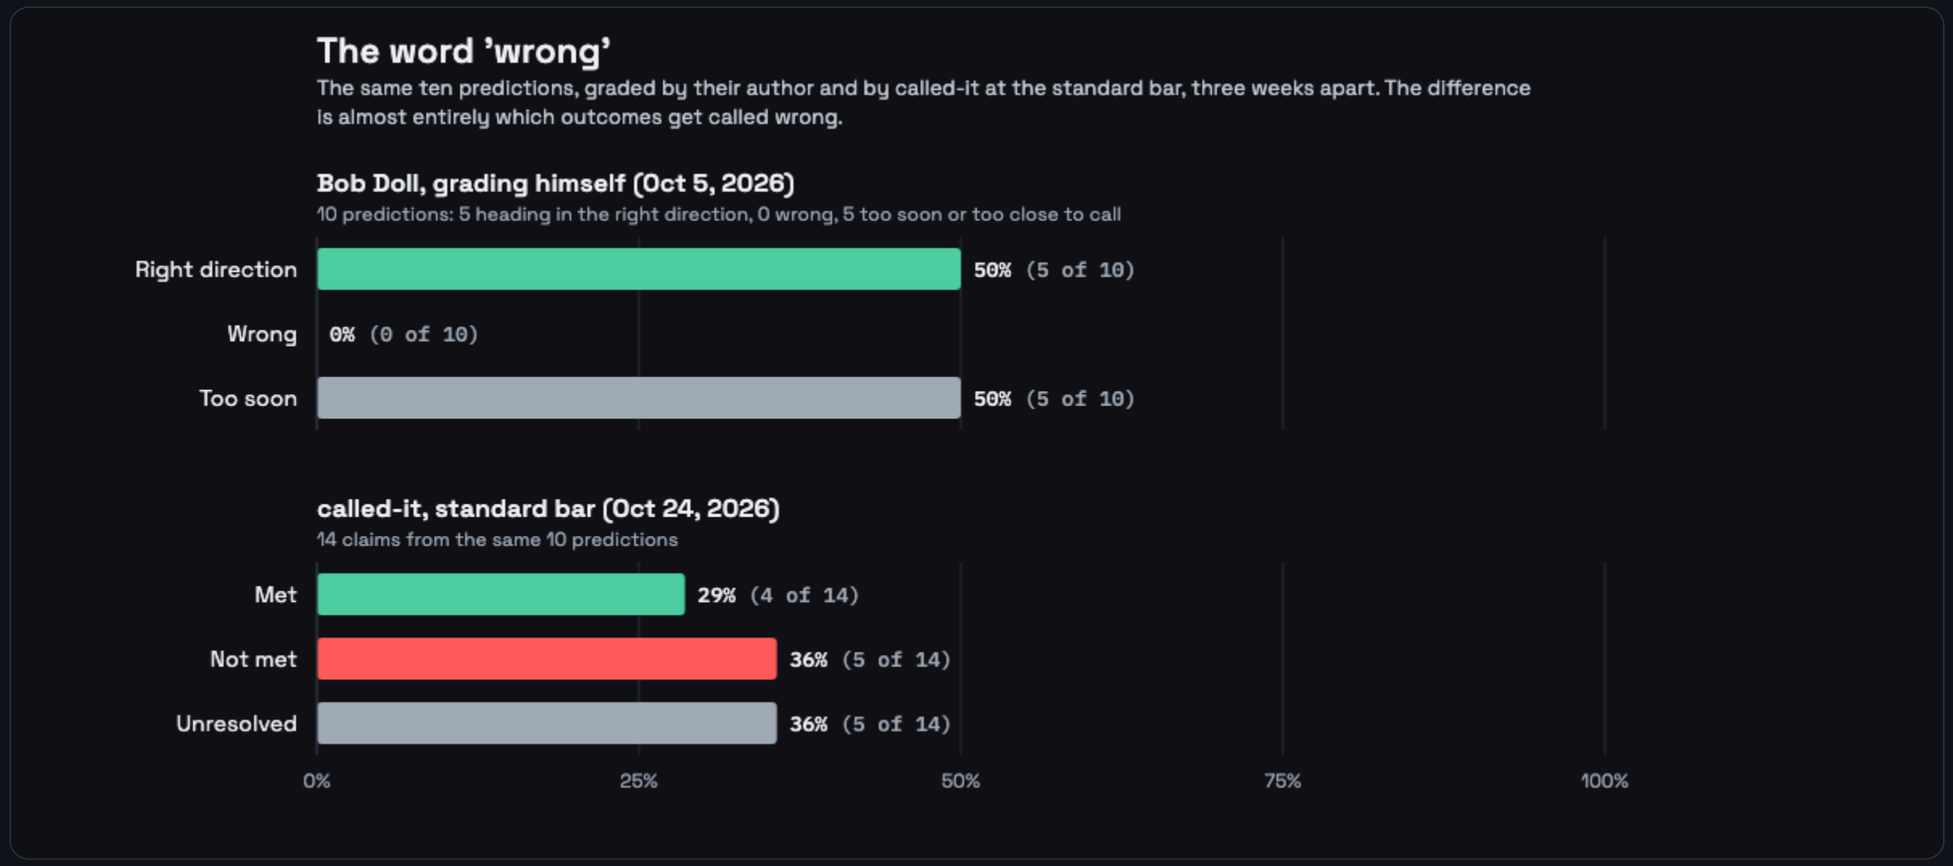

FINDING 3

Numbers protect the reader, not the author

FINDING 4

Self-grades differ on one word: wrong

FINDING 5

Some outcomes have no bar

DAN SHIPPER, EVERY (JAN 5)

”Cursor is the one most likely to stumble.”

Strict: not met. Standard: not met. Lenient: met (competitive pressure was real).

REID HOFFMAN, GUEST (JAN 5)

”I don’t think any of the horses in the race will particularly stumble.”

Strict: not met (no longer independent). Standard and lenient: open.

June 2026: SpaceX acquires Cursor for $60 billion in stock. Not a stumble; not a horse still in the race. Lesson for bar-writing: add one bar the prediction did not seem to need, for the exit.

CAVEATS

What this is not

- Run on October 24 with ten weeks left. Everything with a December horizon is provisional; the midterm claims are open.
- Text only: both the reasoning model and the classifier. A few claims hinge on things a screenshot would settle.
- Our bars are ours. The review sheets are public and the runs replay; argue with the bars, and the regrade is one command.
- Guest predictions on a subject’s podcast are shown apart from the subject’s own.

THE ASK

Before you publish your 2027 list

If you are about to publish

Write your three bars now, while you still mean them, and publish them with the list.

If you published a 2026 list

Run it on yourself and post the receipts. The tool drafts the thread.
